Ashokvatika Mobile App Prompt Review

This PDF summarizes the app-development prompts given in this thread, plus clearer rewritten versions and practical ways to improve future prompts.

Scope: prompts related to UI changes, behavior fixes, data ordering, cart behavior, and closed/open cart workflows.

How to use this document

- Use the ?Original Prompt? section to track what was requested.
- Use the ?Improved Prompt? section when you want to ask for the same kind of change again with less ambiguity.
- Use the ?How to improve this prompt? bullets as a reusable checklist for future app requests.

1. Checkout popup text and color cleanup

Original Prompt

Delete the title. ?Adjust this info container amount ? All the values/ amounts in the price, discount & MRP section to be darker in colour. The titles price, discount, MRP, (* Q, and %) need to be the same colour as the buttons, the orange buttons.

Improved Prompt

In the checkout popup, remove the subtitle ?Adjust this info container amount?. Make all numeric values in the Price, Discount, and MRP sections darker for better readability. Set the labels ?PRICE?, ?Discount?, ?MRP?, ?Q?, and ?%? to the same orange used in the action buttons. Keep layout and spacing unchanged.

How to improve this prompt

- Name the screen or component first, for example ?checkout popup? or ?adjustment dialog?.
- Specify whether text, value, or both should change color.
- Mention if spacing or structure should stay unchanged.

2. Discount, MRP, and cost styling

Original Prompt

Changes for the ?DISCOUNT? Container: The amount needs to be in green and slim. Changes for the MRP container: The container between the ?Q? container and the ?%? container needs to be in orange. Changes for the cost container: The title cost needs to be in gray. The title ?400 and P&L;? needs to be in light gray.

Improved Prompt

In the checkout popup: 1. Make the Discount amount green with a slimmer font weight. 2. In the MRP row, make the middle amount cell between ?Q? and ?%? orange. 3. In the Cost section, set the ?COST? label to gray, and set the upper amount cell plus ?P&L;? label to light gray. Do not change the rest of the popup.

How to improve this prompt

- Split changes by section exactly as they appear on screen.
- Say ?cell?, ?label?, or ?value? to avoid ambiguity.
- If you have a screenshot, mention row position like ?middle amount cell?.

3. Closed deals header and search cleanup

Original Prompt

For closed deal page / screen: 1) The back button should be align as per the cart page and otc main page. 2) Remove the closed text from above the search item button. 3) And in the search button item remove the text ?Search item?.

Improved Prompt

On the Closed Deals screen: 1. Align the back button/header using the same spacing and structure as the Open Cart and OTC main screens. 2. Remove the ?Closed? heading above the search bar. 3. Remove the

?Search items? placeholder text from the orange search field, leaving only the icon. Keep the rest of the layout unchanged.

How to improve this prompt

- Reference another screen when you want matching alignment.
- Call out placeholder text separately from headings.
- State ?keep the rest unchanged? when only a few elements should move.

4. Closed tab icon labels

Original Prompt

In the closed tab: use this icons for clients container details and use Ashokvatika logo orange colour. For client use user.png, for phone use phone.png, for client ID use profile.png, for Transaction ID use Transaction code.png.

Improved Prompt

In the Closed tab client-details container, replace the text labels with uploaded PNG icons. Use `user.png` for Client, `phone.png` for Phone, `client ID.png` for Client ID, and `Transaction ID.png` for Transaction Code. Tint the icons with the Ashokvatika orange brand color. Keep the values and spacing readable.

How to improve this prompt

- Use exact file names as uploaded so asset mapping is clear.
- Say whether icons should replace labels or sit beside them.
- Mention brand color explicitly when tinting assets.

5. Remove placeholder labels in closed tab

Original Prompt

remove the client name, phone number, client ID text titles

Improved Prompt

In the Closed tab client-details container, remove the placeholder text labels ?Client name?, ?Phone number?, and ?Client ID?. Keep only the icons and actual saved values visible.

How to improve this prompt

- List the exact text strings to remove.
- Say whether real values should remain visible.
- Mention the exact container or screen.

6. Restore icon labels with left alignment

Original Prompt

go back with icon container but align it with the left so that name and all the details will be next to it

Improved Prompt

Bring back the icon-based labels in the Closed tab client-details section, but align each icon to the left and place its value text directly beside it in the same row. Avoid stacking the value below the icon.

How to improve this prompt

- Describe the intended row layout clearly.
- Use ?same row? or ?side by side? when that matters.
- Mention what should not happen, for example ?do not stack below?.

7. Inventory page cleanup and newest-first behavior

Original Prompt

In the plants, pot, and suuplies: Remove the title Inventory list and also data like plants, pots and supplies. Remove the search item text from button. Remove the add items text from button. Very important after adding the new products for plants, pot, and suuplies the new added product will be on the top and old added product will go down.

Improved Prompt

On the Plants, Pots, and Supplies inventory screens: 1. Remove the ?Inventory list? heading and the category/count subtitle. 2. Remove the visible placeholder text from the search button. 3. Remove the ?Add items? text from the add button, keeping the icon only. 4. Sort inventory so the latest created product appears first and older products move down.

How to improve this prompt

- Separate visual cleanup from data ordering requirements.
- Use ?latest created item first? instead of only ?new product on top?.
- Mention whether ordering applies to local data, Firebase data, or both if known.

8. Newest product first bug follow-up

Original Prompt

Since i added product name and fyucs it landed down i want latest product first and then old product please do it asap

Improved Prompt

There is still a bug in the inventory ordering. Newly added products such as ?Product Name? and ?fycus? are appearing lower in the list. Fix the data source and UI so the most recently created product always appears at the top across the category screen and synced Firebase data.

How to improve this prompt

- When a previous change did not fully work, mention that it is still failing.
- Include one or two concrete examples from the screen.
- Ask to verify both UI sorting and backend-fed sorting.

9. Open cart and closed deal product images

Original Prompt

on the open cart see that the product details is not showing the image. here also it should show image and as well as in the closed deal page

Improved Prompt

In Open Cart and Closed Deals, show the real product image in each product thumbnail instead of fallback initials whenever an image is available. Preserve initials only as a fallback when no image exists.

How to improve this prompt

- Specify whether fallback initials should remain for missing images.
- Mention both affected screens explicitly.
- Call out whether the issue is data not being passed or UI not rendering.

10. Open cart long-press delete bug

Original Prompt

In open cart: as the screenshot attached the product is not deleting after long press kindly do it asap.

Improved Prompt

In Open Cart, fix the long-press product editor so deleting an item actually removes it from the row/cart. Keep quantity editing working separately, and make the delete action behave reliably from the popup.

How to improve this prompt

- Describe the actual broken behavior, not just the expected result.
- Mention nearby actions that should still work, such as quantity changes.
- If a popup is involved, name it directly.

11. Popup action placement

Original Prompt

the cross button should be on top corner and right button will be on the right bottom same as it is

Improved Prompt

In the Open Cart item popup, move the orange delete cross to the top-right corner. Keep the green confirm button in the lower-right corner exactly where it is now. Do not change the rest of the popup layout.

How to improve this prompt

- Use ?top-right? and ?bottom-right? for precise positioning.
- State which element should remain unchanged.

- Reference color or purpose if two icons could be confused.

12. General stabilization request

Original Prompt

optimize the full app remove the bugs and give it

Improved Prompt

Perform a focused stabilization pass across the app. Prioritize real bugs, broken interactions, warnings, and inconsistent UI behavior over broad redesign. After changes, provide a summary of fixes, verification steps, and any remaining risks.

How to improve this prompt

- Large requests work better with priorities.
- Ask for a bug-fix pass rather than an undefined ?optimize everything?.
- Request a summary of remaining risks so the result is actionable.
