Magic Prompts Handbook

First-attempt prompts designed to produce sharper results with less back-and-forth.

How To Use These

- Replace the bracketed placeholders with your real context before sending.
- Keep constraints concrete: format, audience, length, tone, and must-have points.
- When a task matters, paste examples or source material directly into the prompt.
- If the answer is weak, reuse the "Prompt To Improve A Prompt" template on your own prompt.

Best practice: pair a clear outcome with enough context. Most first-try failures happen because the AI is missing audience, constraints, or the exact deliverable.

Copy-And-Use Prompt Library

Universal Prompt Formula

Use this when you want the highest chance of a strong first draft across almost any task.

```
You are an expert in [domain]. Help me with [specific outcome].
Context: [important background, audience, constraints].
Requirements:
1. Ask no more than 1 clarifying question only if absolutely necessary.
2. If enough context already exists, proceed directly.
3. Give the answer in [format].
4. Make it practical, specific, and ready to use.
5. Avoid fluff, generic advice, and repetition.
6. If useful, include a final improved version I can copy immediately.
```

Write Better Output

For emails, proposals, copy, messages, posts, SOPs, and polished professional writing.

```
Act as a senior writer. Rewrite or create the content below so it sounds clear, sharp, and natural.
Audience: [who will read it].
Goal: [what it should achieve].
Tone: [confident / warm / persuasive / concise].
Constraints: [length, must-include points, words to avoid].
Return only the final version first. After that, add a short optional note called "Why this works" with 3 bullets max.
```

Deep Research Prompt

For market research, product comparison, strategy notes, and decision support.

```
Act like a research analyst. I need a reliable answer on: [topic].
Please structure the response as:
- Executive summary
- Key facts and patterns
- Risks / unknowns
- Recommendation
Use clear reasoning, separate facts from assumptions, and highlight what matters most for someone deciding quickly.
```

Learn Anything Fast

For studying a topic quickly without getting buried in theory.

```
Teach me [topic] like a great tutor.
My level: [beginner / intermediate].
Goal: I want to understand it well enough to [specific use].
Explain it in this order:
1. Simple overview
2. Core concepts in plain English
3. One intuitive example
4. Common mistakes
5. A short practice exercise with answer
```

Problem Solving Prompt

For messy decisions, tradeoffs, troubleshooting, and planning.

```
I need help thinking through this problem: [problem].
Context: [relevant details].
Please do the following:
- Break the problem into parts
- Identify the likely root causes or key drivers
- Compare the best 2 to 4 options
- Recommend the best path with reasons
- End with the next 3 concrete actions
```

Prompt To Improve A Prompt

Use this when you already have a rough prompt but want a stronger version that works first try.

```
Improve the following prompt so it produces a much better answer on the first attempt.
Original prompt: [paste prompt]
My actual goal: [what I really need]
Return:
1. An improved prompt
2. Why it is better in 5 bullets or less
3. A shorter backup version if I want something fast
```

Coding Prompt

For code generation, bug fixing, refactors, or implementation help.

```
Act as a senior engineer. Help me with [task].
Tech stack: [stack].
Current behavior: [what is happening].
Desired behavior: [what should happen].
Constraints: [performance, style, compatibility, no breaking changes].
Please:
- Explain the likely cause briefly
- Provide the exact code or patch
- Mention edge cases
- Include a short test or verification checklist
```

Business / Strategy Prompt

For founders, operators, consultants, and managers.

```
Act as a strategic advisor. Help me create a strong plan for [goal].
Business context: [industry, stage, offer, constraints].
I want an answer that includes:
- Objective
- Strategy pillars
- Priority actions
- Risks and mitigation
- What to measure weekly
Keep it decisive and practical, not academic.
```

Content Creation Prompt

For YouTube scripts, LinkedIn posts, Instagram captions, blogs, and hooks.

```
Create high-performing content for [platform] about [topic].
Audience: [audience].
Goal: [reach / leads / trust / sales].
Style: [educational / bold / story-driven / premium].
Please include:
- 5 hook options
- 1 strongest final version
- A CTA that feels natural
Avoid generic phrasing and make the message feel current and concrete.
```

Negotiation / Reply Prompt

For difficult conversations, client replies, salary negotiation, and calm conflict handling.

```
Draft a reply to this message / situation: [paste details].
My goal is to: [goal].
Tone should be: [firm but respectful / warm and confident / diplomatic].
Please provide:
- Best final reply
- Shorter version
- One stronger version if I need to push back more
```

Data Extraction Prompt

For turning messy text into a neat structure.

```
Extract the important information from the following content: [paste text].
Return it as a clean table with these columns: [columns].
If any field is missing, leave it blank rather than guessing.
At the end, add a 3-bullet summary of the most important patterns.
```

First-Attempt Booster

Append these lines to almost any prompt when you want stronger output quality.

```
Before answering, identify the real objective behind the request.
Then produce the best possible answer for that objective, not just the literal wording.
Be specific, decisive, and useful.
Where there are tradeoffs, make a recommendation and explain it briefly.
Return the strongest final answer first.
```

Fast Upgrade Checklist

- ■ State the exact outcome you want, not just the topic.
- ■ Specify who the answer is for.
- ■ Add hard constraints like length, format, tone, budget, tech stack, or deadline.
- ■ Tell the model to be decisive and practical.
- ■ Ask for the final answer first, then explanation second.
